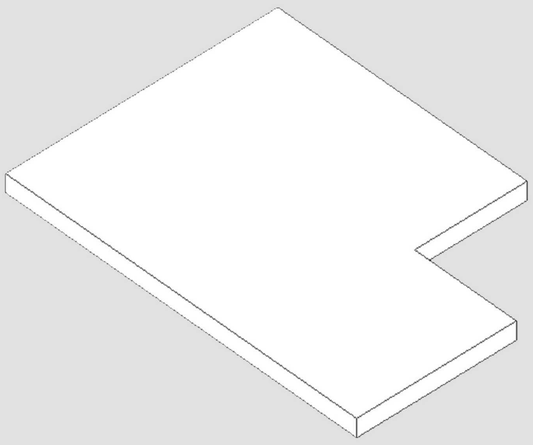
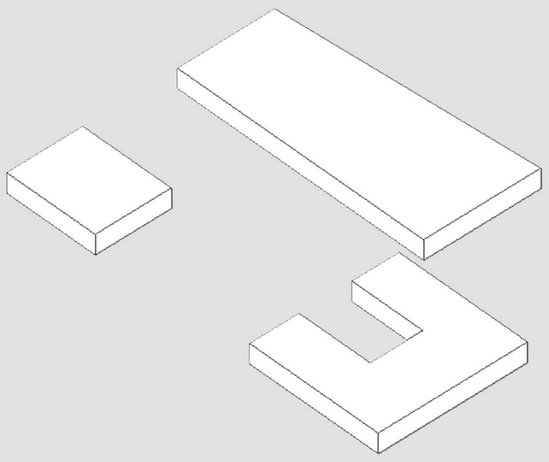
EBABIL STREET

SILHOUTTE 1/500



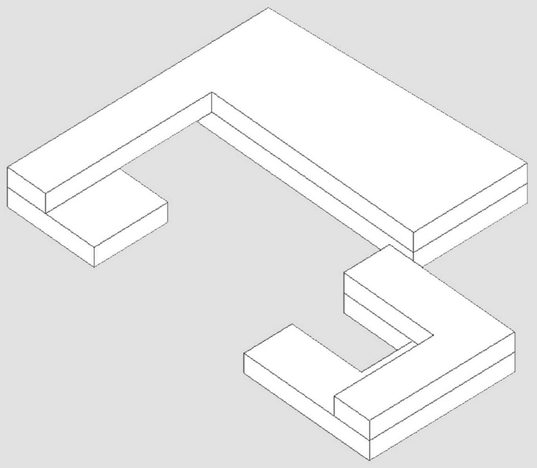
1. MASSING

I STARTED WITH A FULL SOLID BLOCK
THAT FILLED THE ENTIRE SITE.



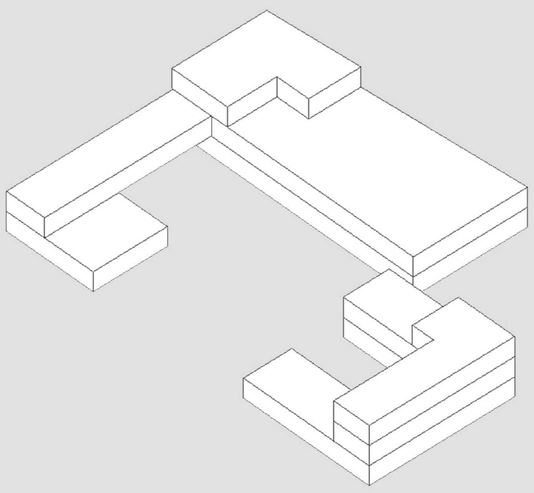
2. SUBTRACTIONS & SETBACKS

I CARVED OUT VOIDS FOR
THE COURTYARD AND ENTRANCES,
AND PUSHED THE BUILDING BACK
FROM THE NEIGHBOR.



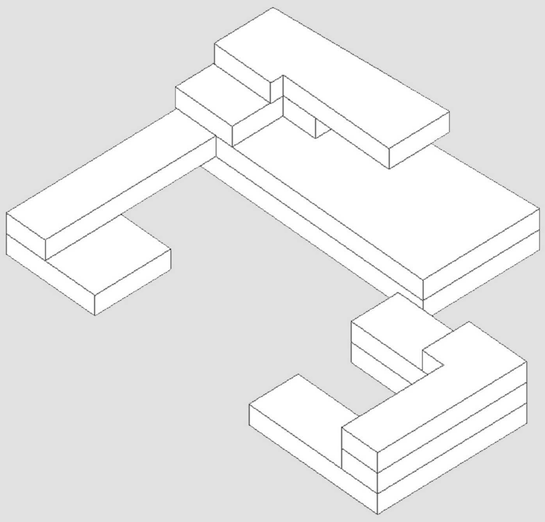
3. FOLLOWING TOPOGRAPHY

I DUPLICATED THE LEVEL AND
SHAPED THE DESIGN TO FOLLOW
THE SITE'S TOPOGRAPHY.



4. UPPER ACCESS

I ADDED A LEVEL AND OPENED
AN ENTRANCE FROM THE UPPER STREET,
ADJUSTING THE MASS FOR CIRCULATION
AND NEIGHBOR SPACE.



5. FLOATING VOLUME

I PLACED THE FINAL FLOOR AS
A LIFTED UNIT TO ENHANCE VIEWS
AND CREATE A LIGHTER TOP.

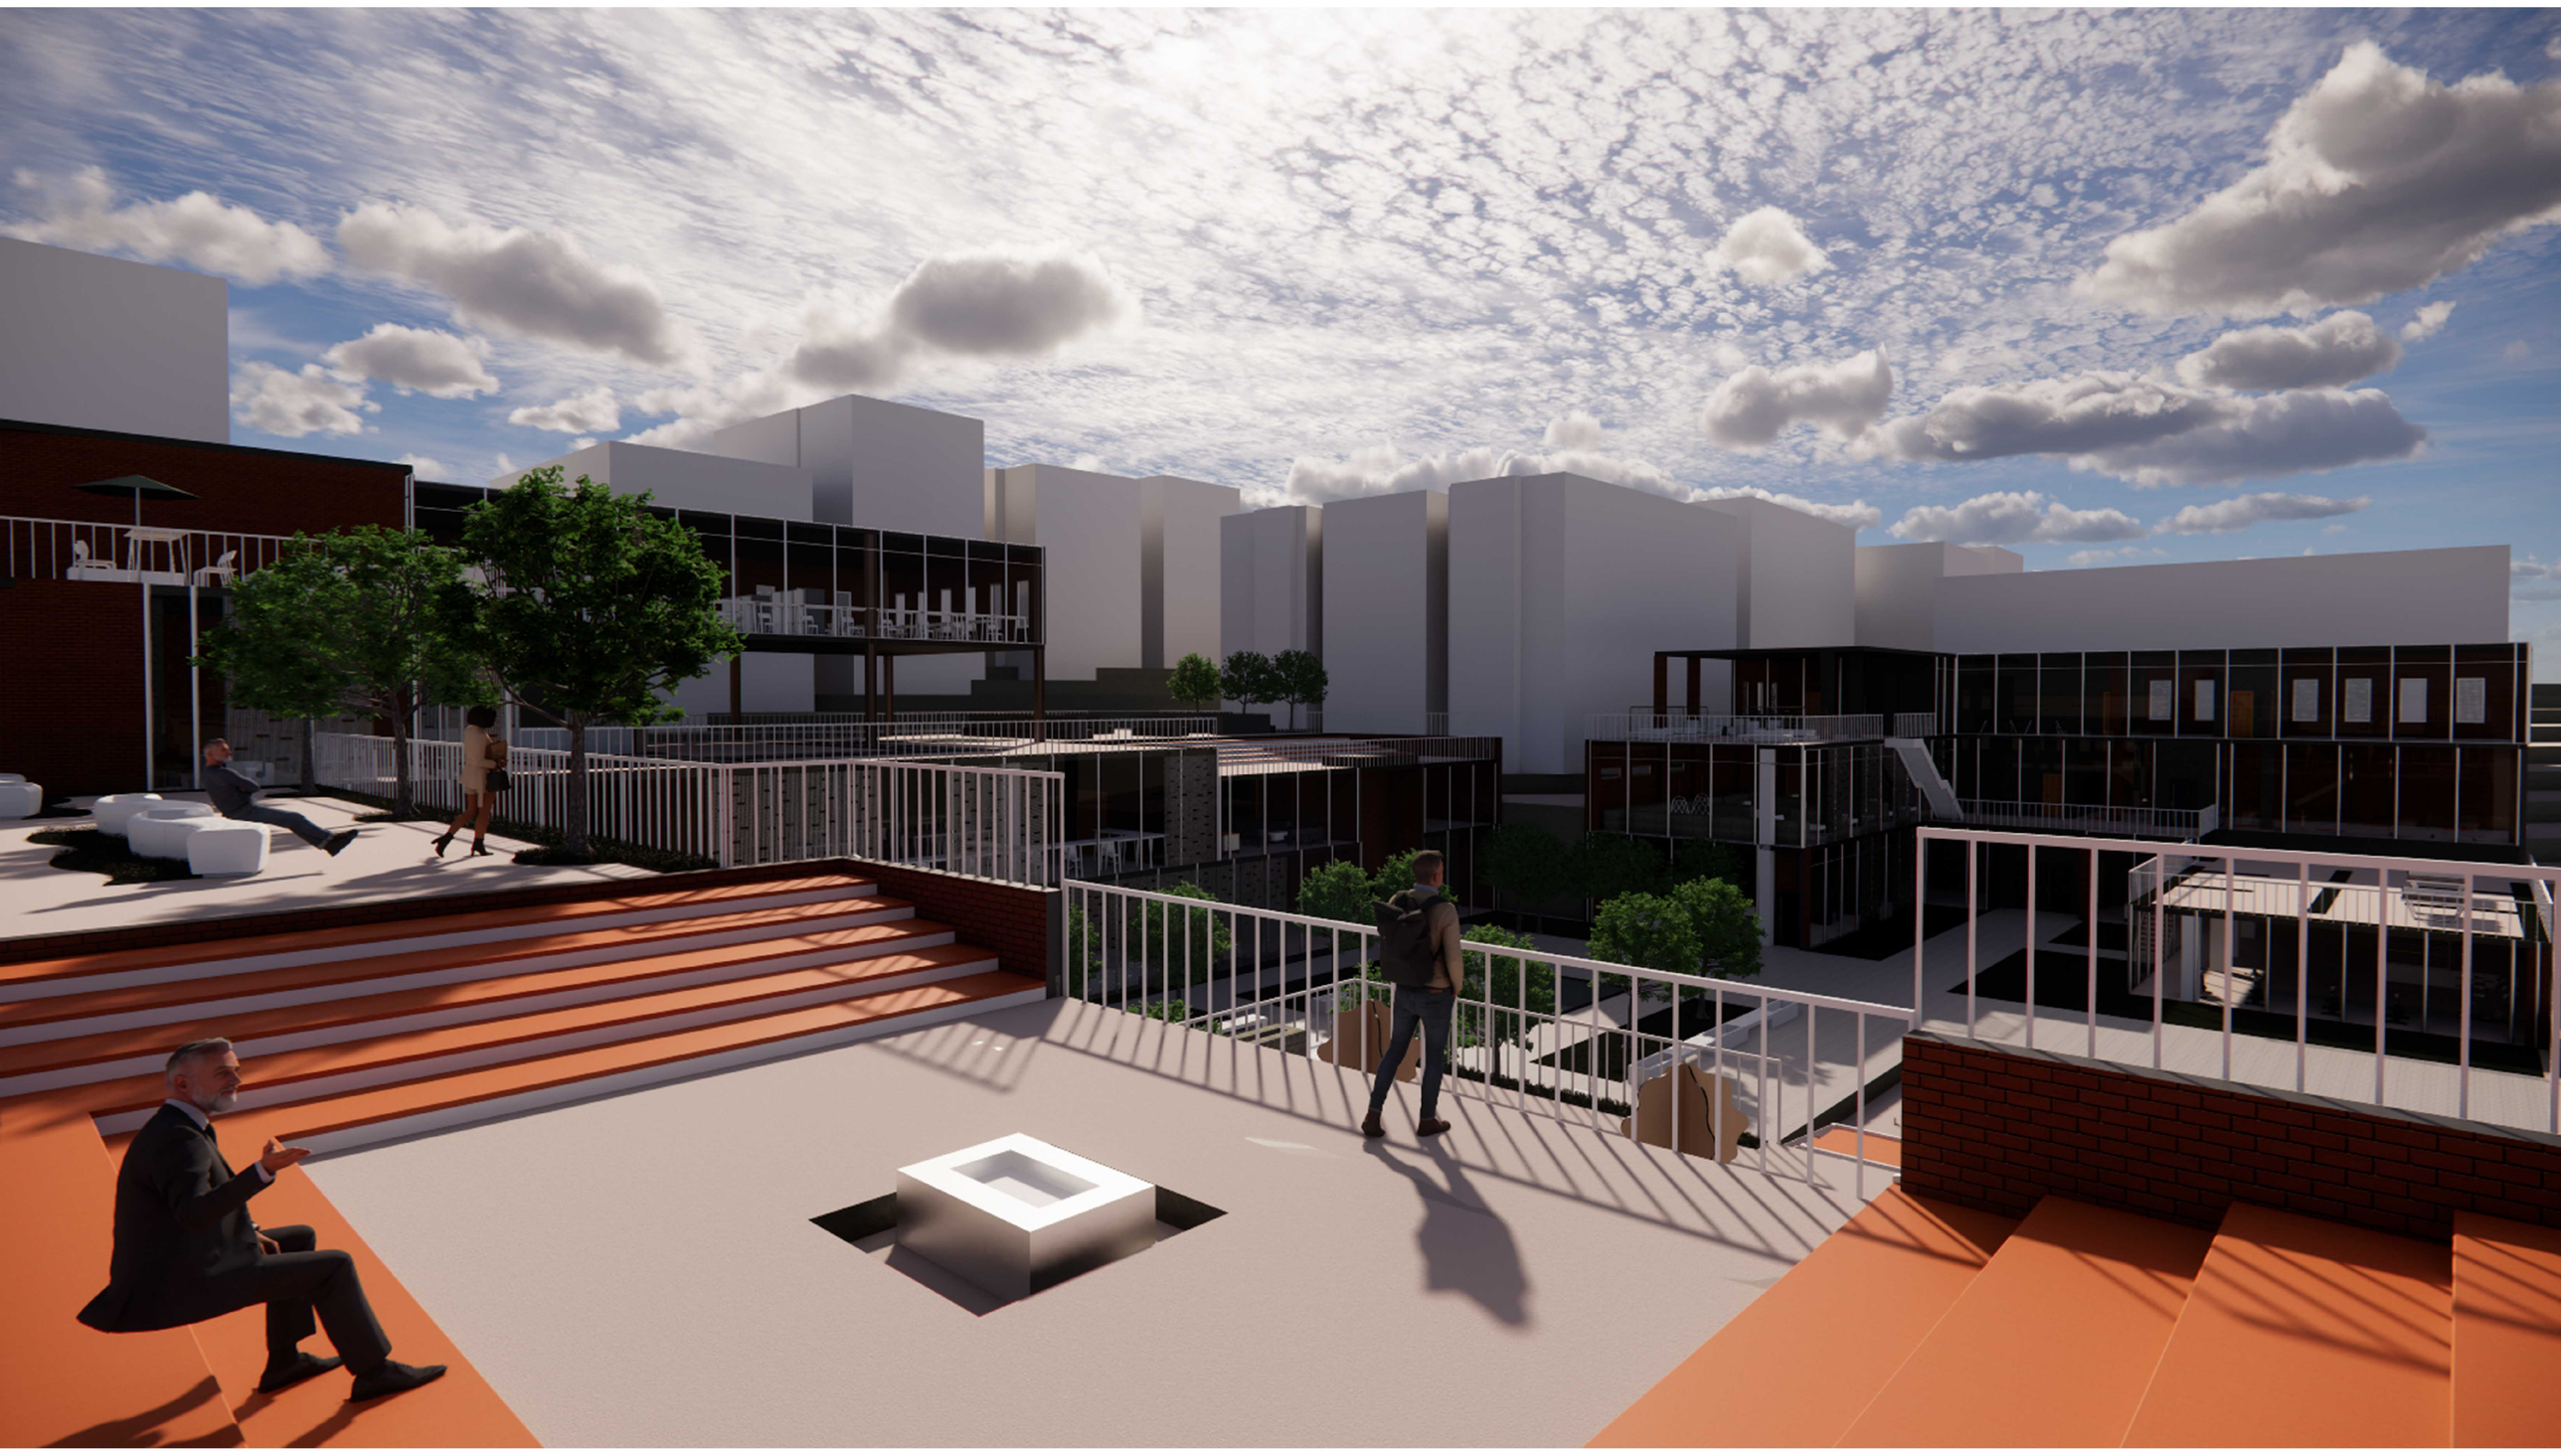
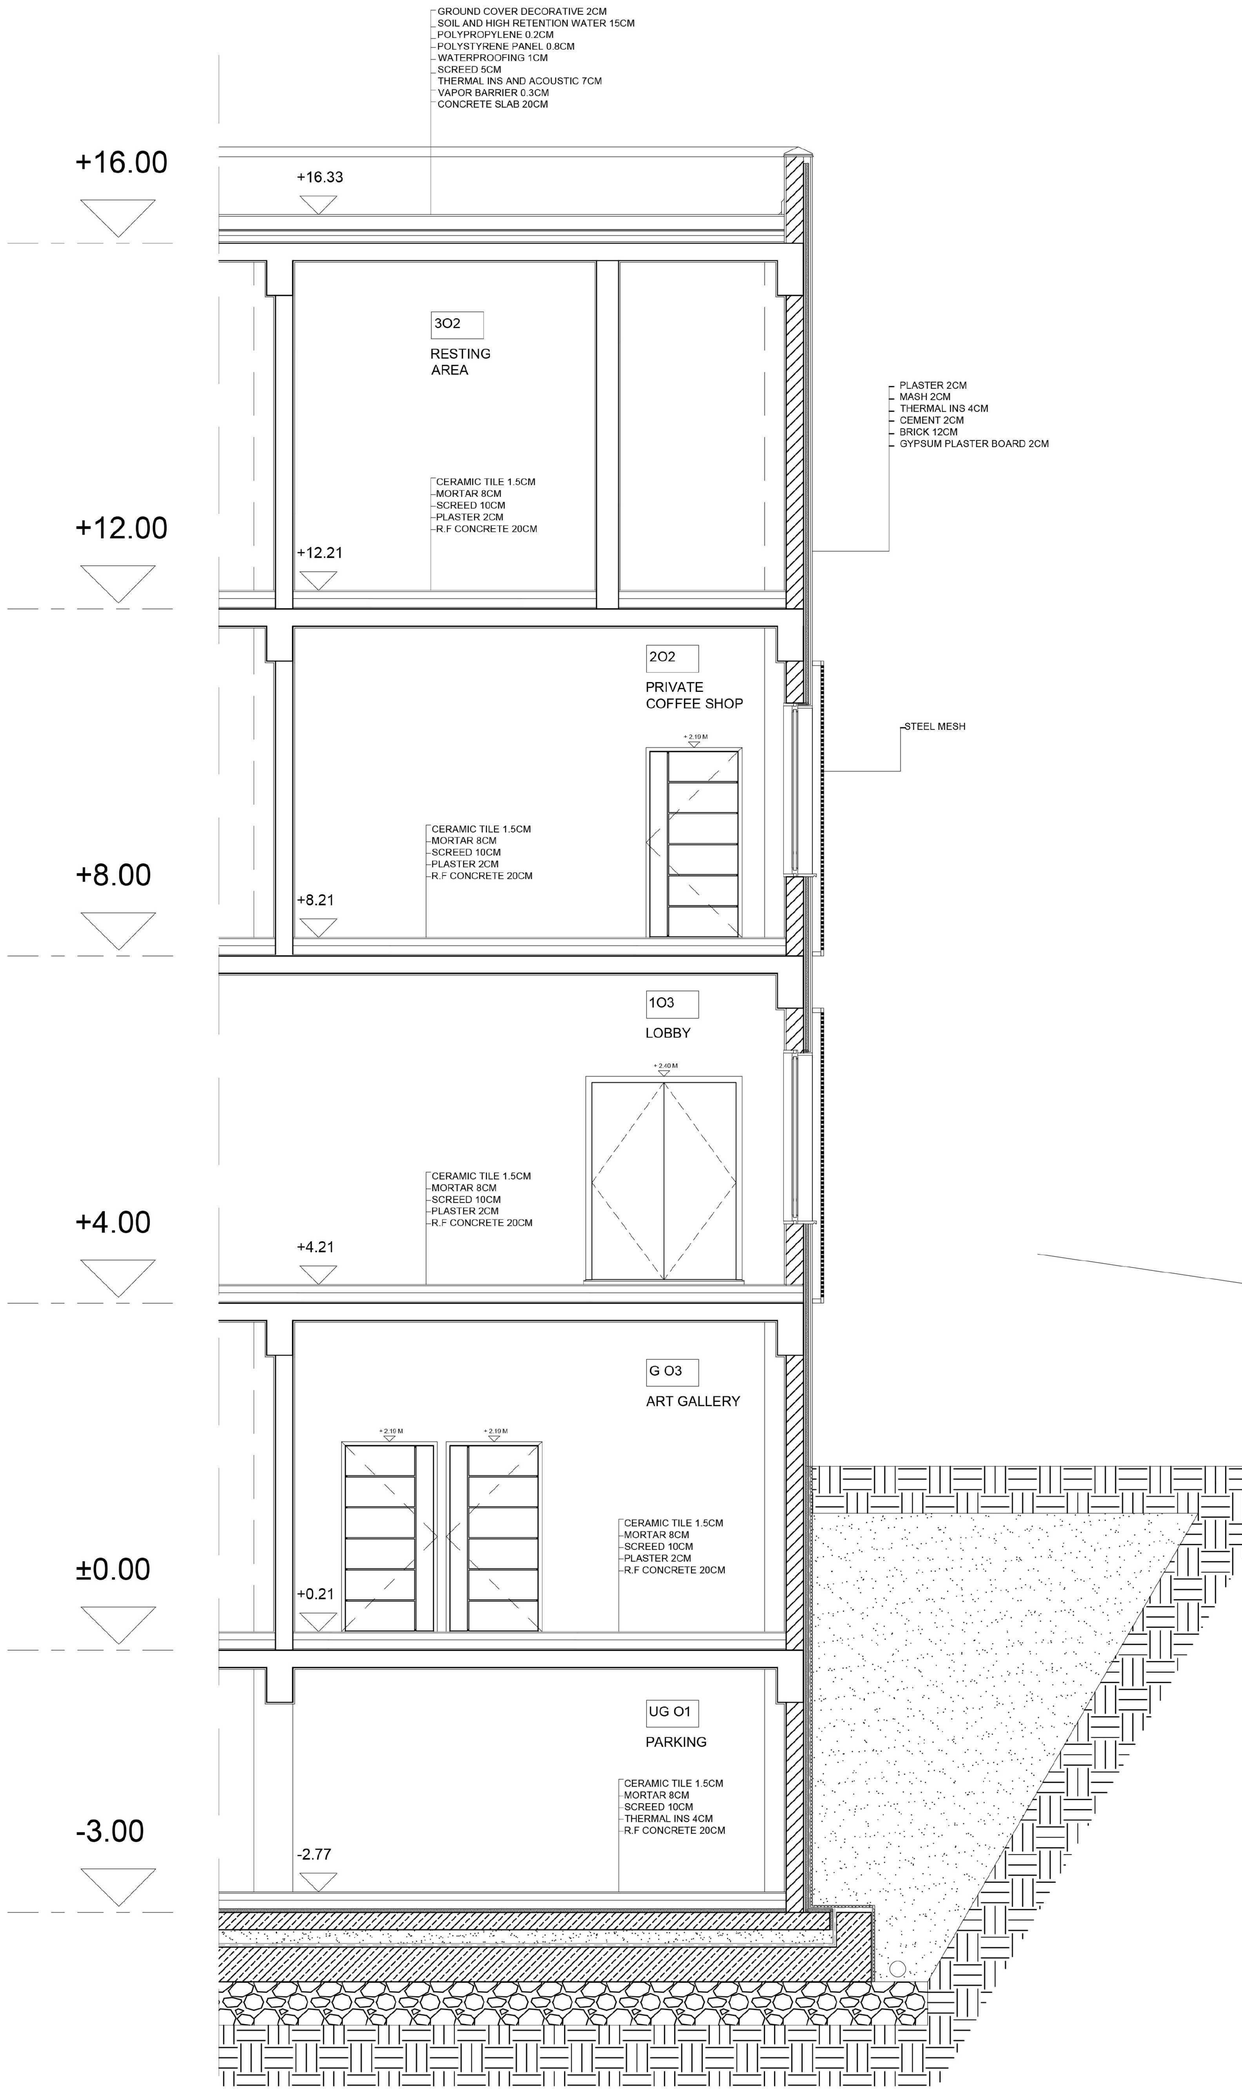
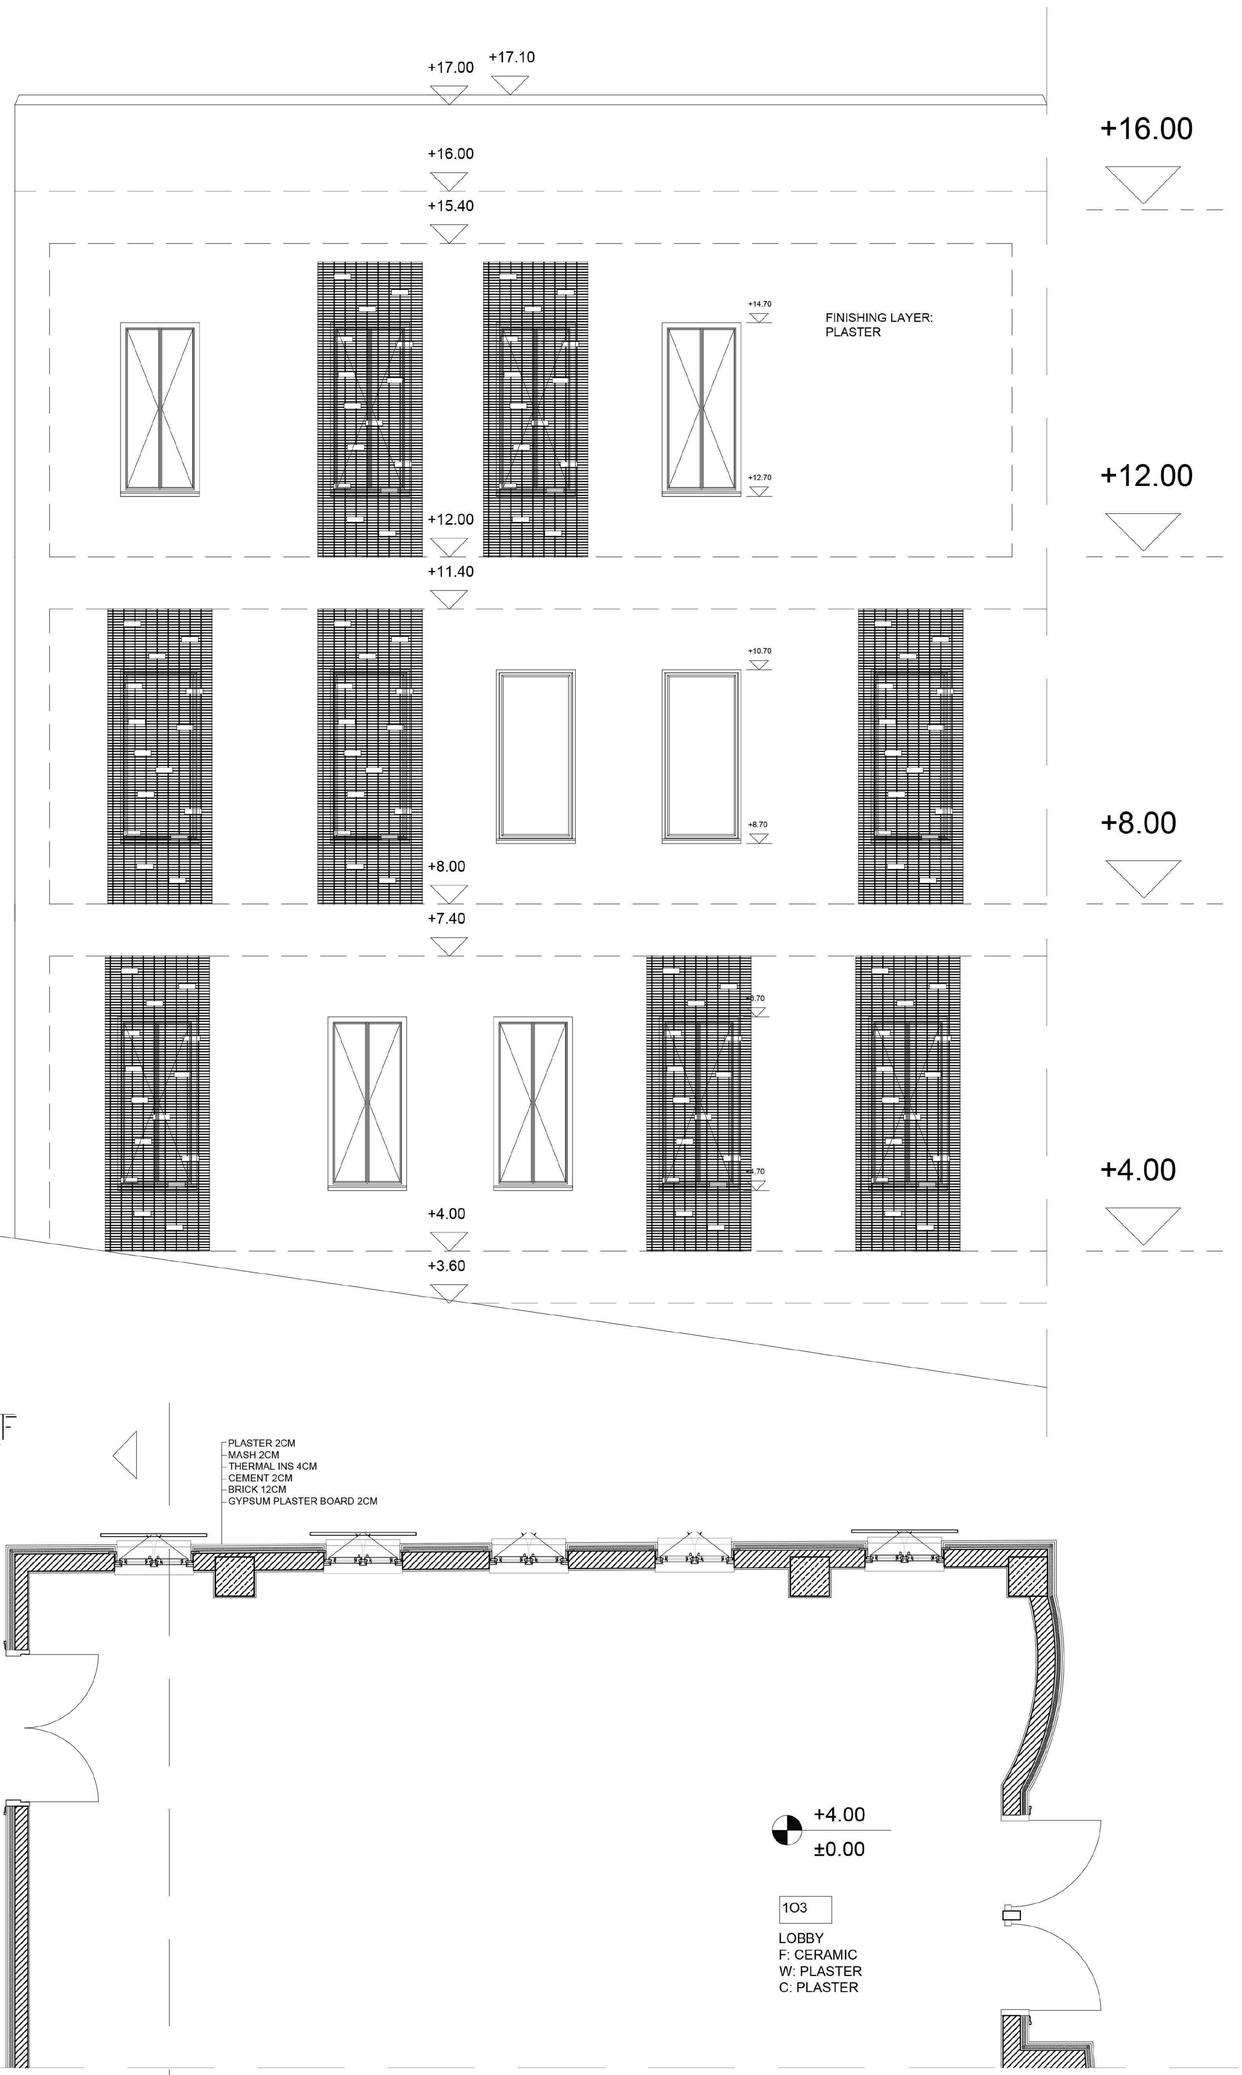
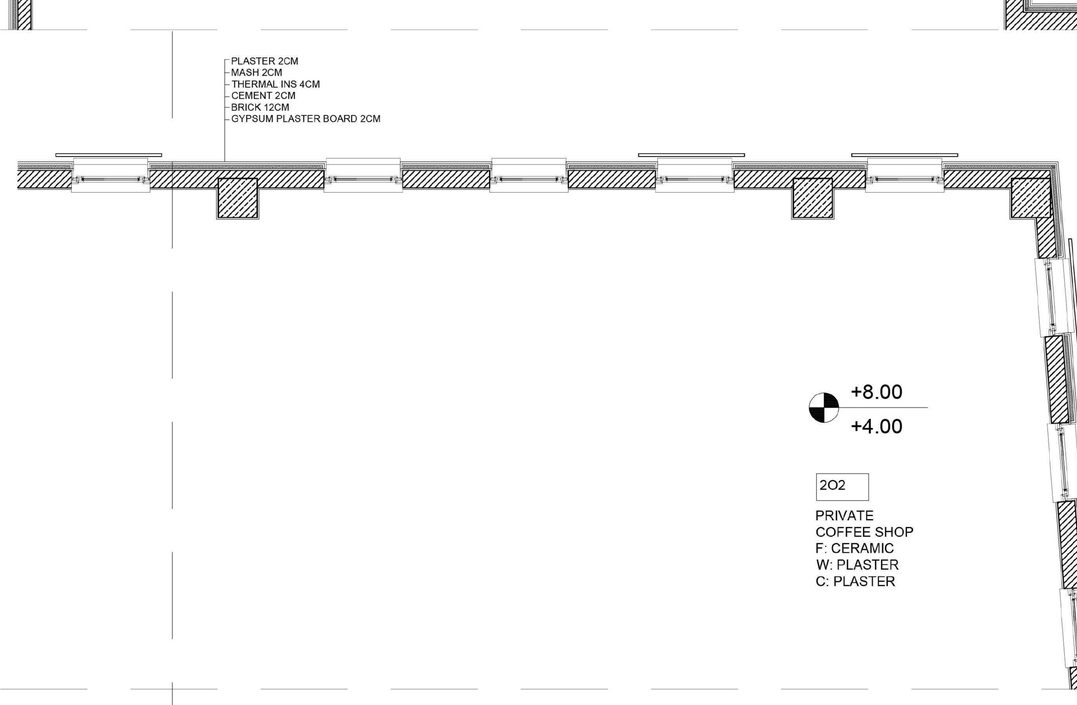
SOUTH EAST ELEVATION







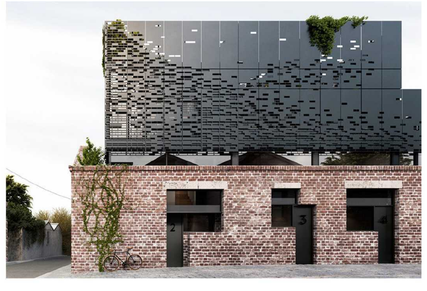


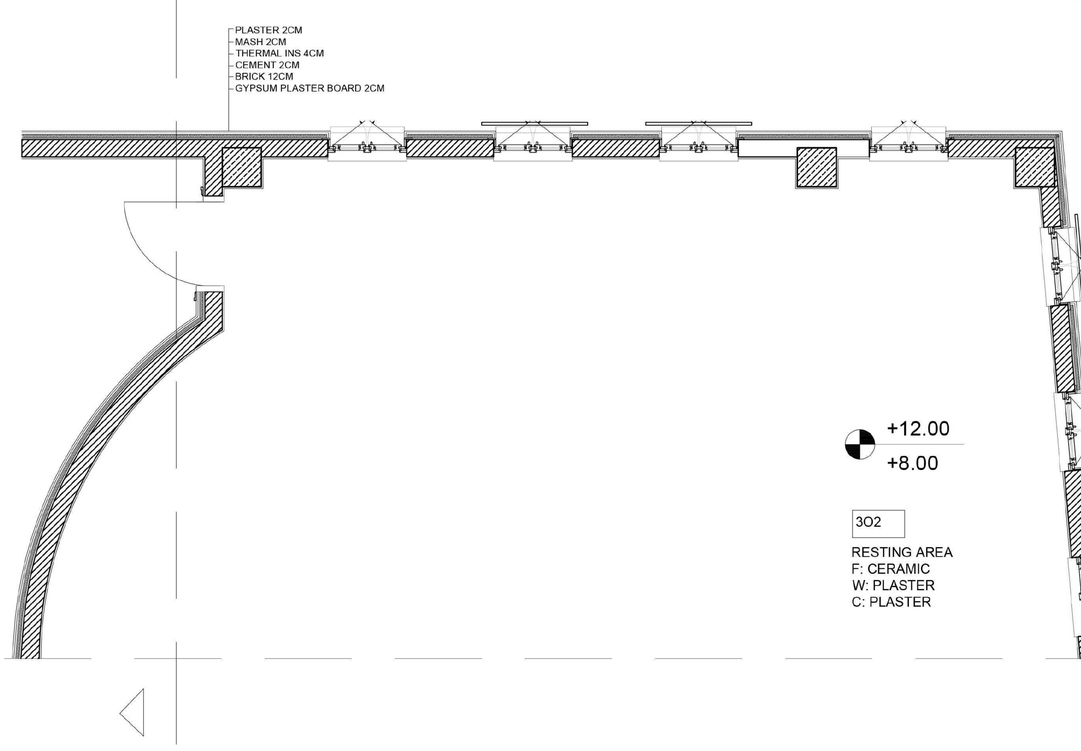
Solar shading – Steel mesh blocks direct sunlight, helping to reduce overheating indoors.

Energy efficiency – By minimizing heat gain, it lowers the need for artificial cooling and saves energy.

Daylight control – The mesh allows filtered daylight, reducing the need for artificial lighting during the day.

Privacy screen – Mesh provides visual privacy from the outside while maintaining visibility from within.

Material contrast – Steel mesh creates a modern, textured look that beautifully complements the warmth and solidity of a brick wall.




Design integration – I introduced rectangular openings in the mesh to create visual and spatial connections with the brick wall behind, adding depth and layering to the facade.
