

[illegible]

The proposal transforms the underused and often unsafe Plaza Street, located off Blank Street in Newcastle upon Tyne, into an exciting public dining space. The design replaces the existing parking area with a lightweight, temporary structure made from scaffolding, creating a quick assembly, safe installation, and straight forward dismantling with minimal disruption to the city. A canopy made from reused fabric provides a protected seating area while allowing natural light to filter through. Additional lighting is introduced to enhance visibility and give the space a sense of purpose and safety during the evening.

Small street kiosks are positioned along the surrounding roads, offering food, drinks, and everyday goods to encourage pedestrian activity and support nearby businesses, such as the café, restaurant, and local bar.

The project also collaborates with a local charity through a token bus scheme, enabling visitors to 'pay it forward' by pre-purchasing items for others to need. The space has been designed to be inclusive and welcoming particularly for those experiencing homelessness, featuring a stronger sense of community and positive social interaction.

The geometric design language, characterised by triangular forms, creates a clear spatial organisation and distinct visual identity. Overall, the project represents a regulated approach to temporary urban space use and demonstrates a sustainable, community centred approach to temporary public place-making.

Friars Street / Monk Street

Public Dining Space, Friars Street CarPark, Newcastle upon Tyne

The proposal transforms the underused and often unsafe Friars Street, located off Monk Street in Newcastle upon Tyne, into an inviting public dining space. The design replaces the existing parking area with a lightweight temporary structure made from scaffolding, allowing for quick assembly, safe occupation, and straight forward disassembly with minimal environmental impact. A canopy made from reused fabric provides sheltered seating while allowing natural light to filter through. Additional lighting is introduced to enhance visibility and give the space a sense of purpose and safety during the evening.

Small street kiosks are positioned along the surrounding roads, offering food, drinks, and everyday goods to encourage pedestrian activity and support nearby businesses, such as the cafe, restaurant, and local bar.

The project also collaborates with a local charity through a token box scheme, enabling visitors to 'pay it forward' by pre-purchasing items for others in need. The space has been designed to be inclusive and welcoming, particularly for those experiencing homelessness, fostering a stronger sense of community and positive social interaction.

The geometric design language, characterised by triangular forms, creates a clear spatial organisation and a distinct visual identity. Overall, the project reactivates a neglected urban site, encourages safe and inclusive public use, and demonstrates a sustainable, community centred approach to temporary urban place-making.
