Master Plan

-  Gathering Place
-  children`s Play Area
-  Residents` Farm
-  1 Store Mix House
-  2 Store Mix House
-  1 Store Common House
-  2 Store Common House
-  Cycle Lane
-  Sidewalk
-  Stair, Ramp, Auditorium

Scale: 1/500

Projects

1- Gathering Place: Memphis River Parks

3- Allotments:

5- Cycle lane: Vaddi Istanbul Building

7- Auditorium: English Garden Amphitheatre

2- Children's play area: Hollingdean Park Play Area

4- Mix and Common House: Marmalade Lane

6- Sidewalk: Chapeltown Co-Housing

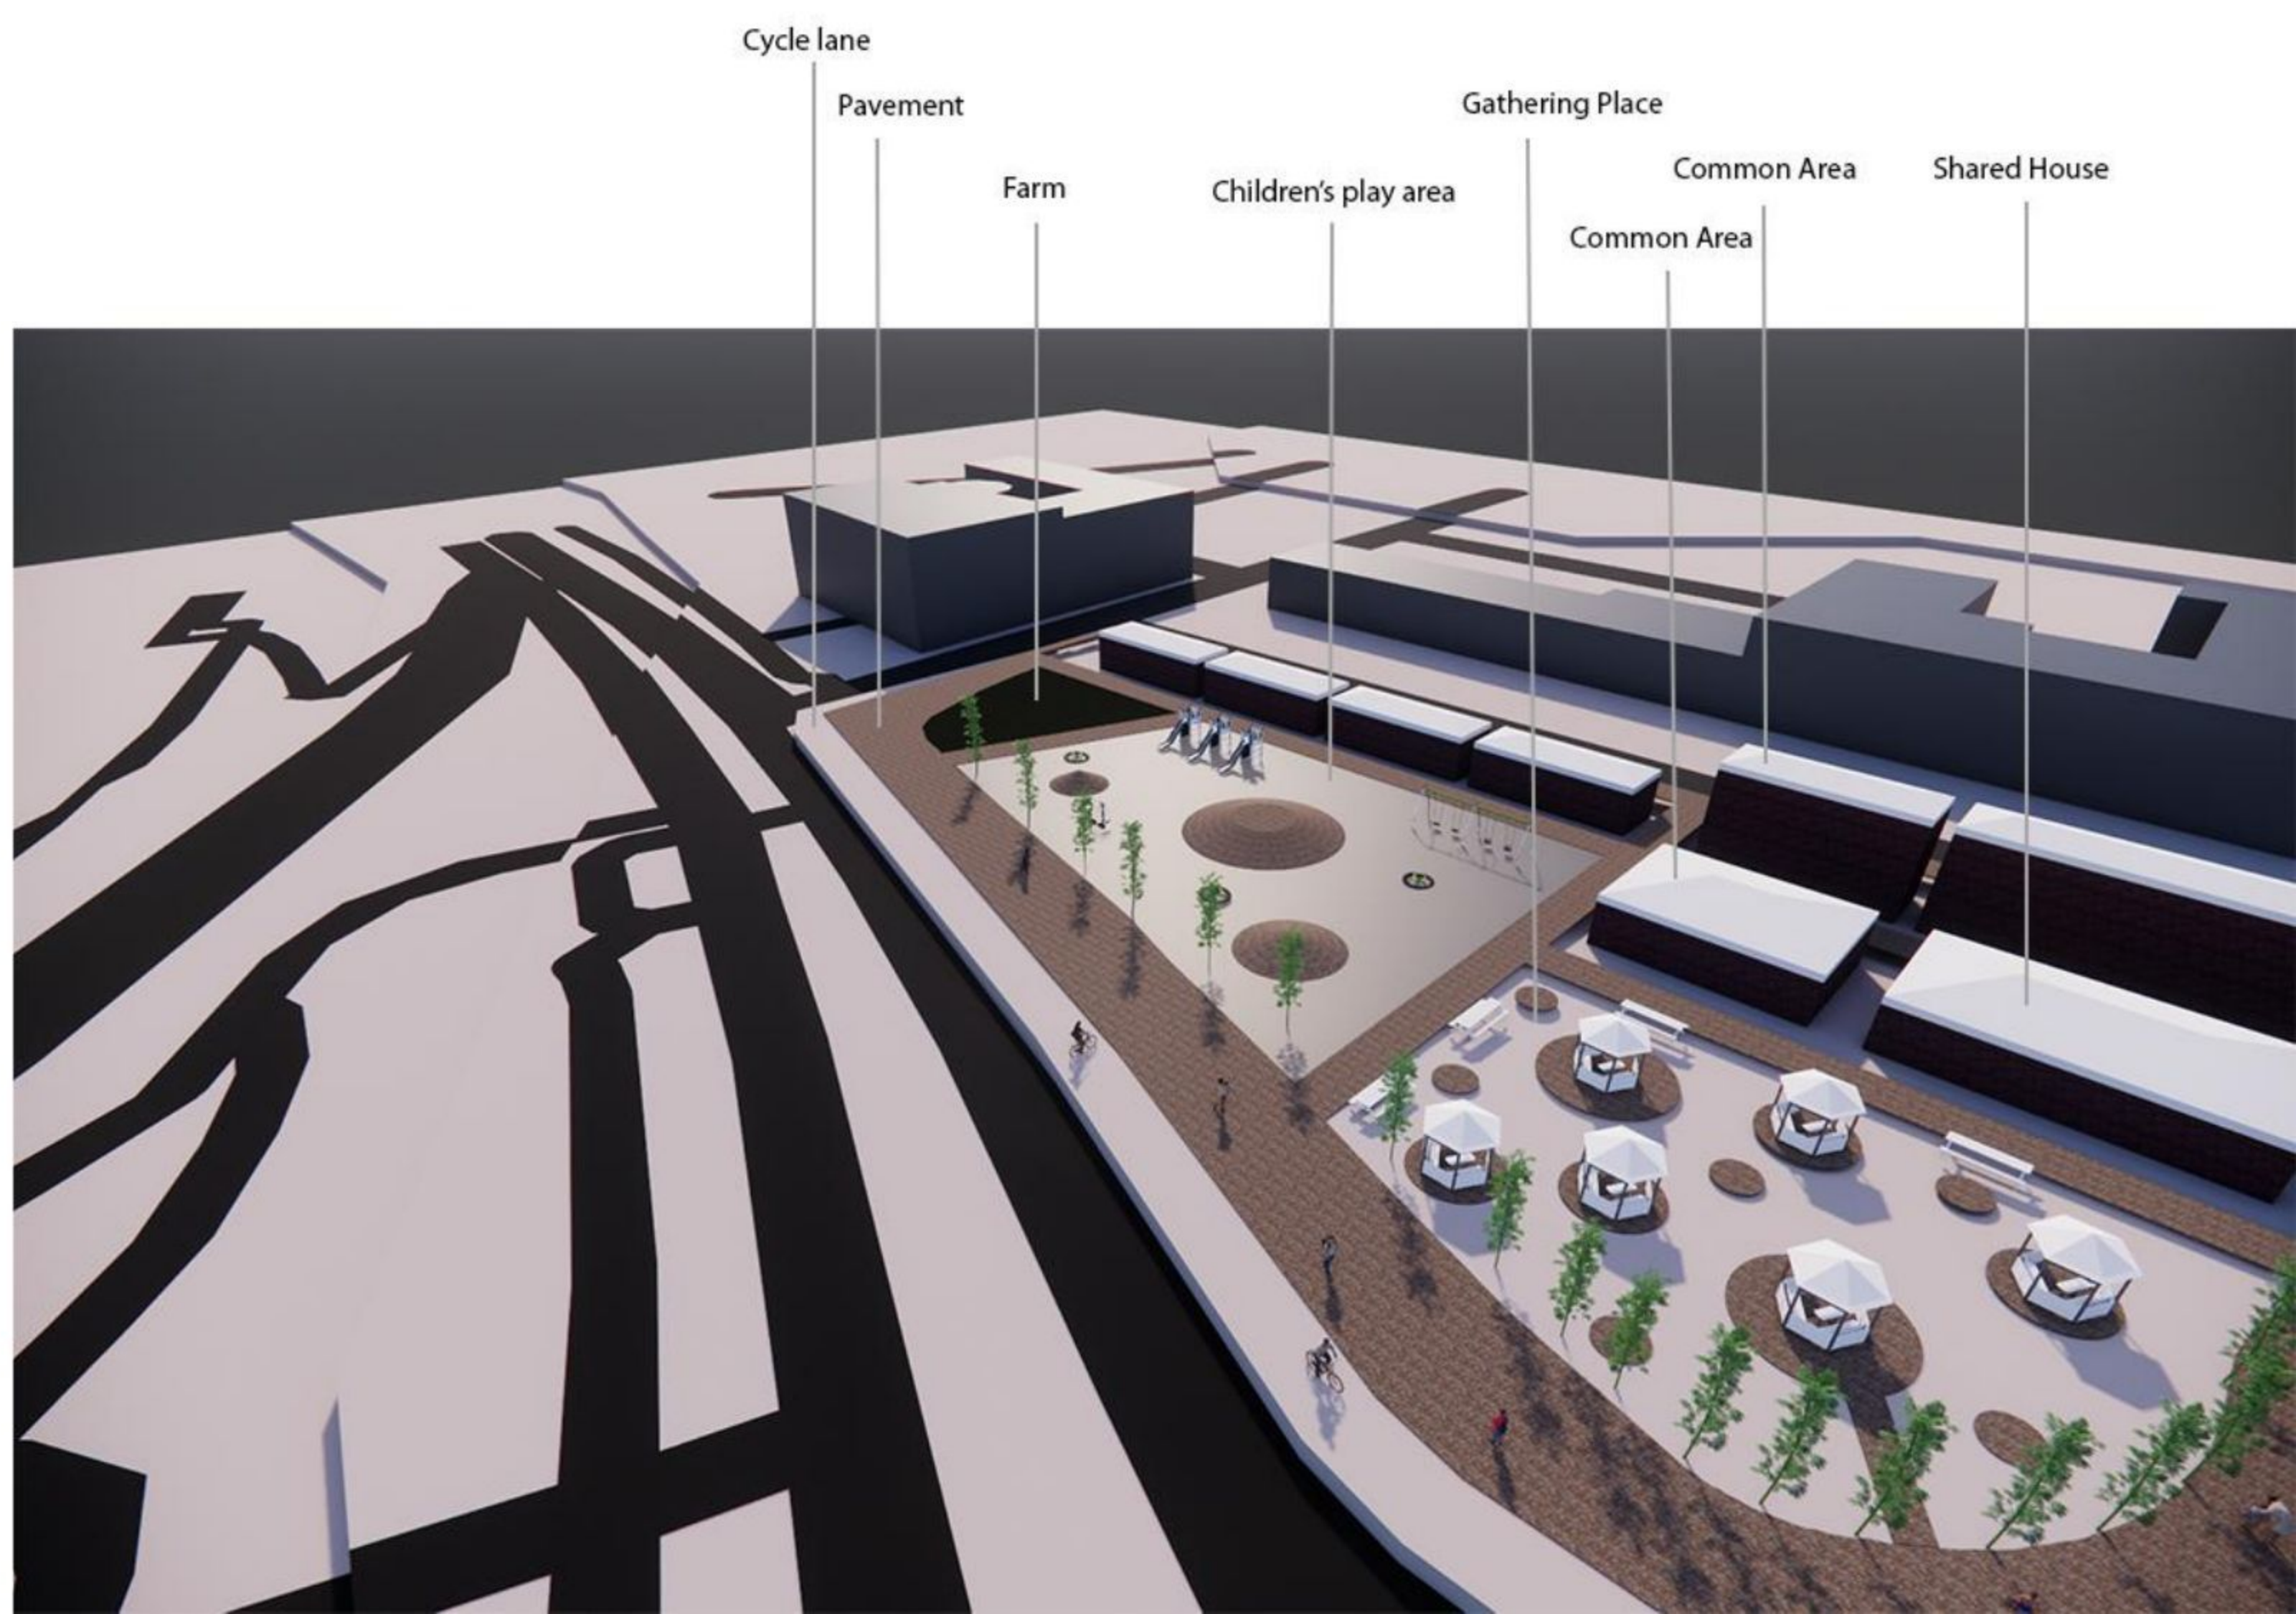

Due to the lack of commercial buildings in the area and the residents' inability to meet their daily needs within walking distance, I decided to design a co-housing project. In the central part of the building, in addition to a communication area, I allocated a section for shopping so that residents can fulfil their everyday needs and interact with other people living in the building. I also created several secondary pathways within the site to encourage walking and occasional cycling, aiming to reduce dependency on cars.

Considering the topography of the area, I arranged the building heights in a way that allows all floors to have a sea view. I dedicated a large portion of the site to a garden, connecting it to the surrounding green areas so that both residents and people from the neighborhood can use this open communication space.

The placement of the windows is designed to maximize natural sunlight. I located the garden along the main street to make the area more vibrant and to blend it with the surrounding urban activity and sounds. The residential units are positioned further back, closer to quieter, low-traffic streets, to ensure greater comfort and tranquility for those living in the building.
